*Beautiful décors,
inspiring design.*”

CANNES

Herringbone & Chevron Parquetry

If you're looking to make a spectacular design statement our De Marqué pre-finished parquetry is a smart move.

The engineered construction provides dimensional accuracy and stability with a wear layer designed to last for centuries. Presented with a universal T&G system

for direct adhesive installation only. Both Chevron and Herringbone patterns are available in a range presented with classic décors of subtle charm that's sure to make an impact. De Marqué parquetry will definitely deliver a sense of calm and beauty into your life.

Engineered for Quality

- Multiply Hardwood Construction
- Grade ABC Janka Hardness 5.5 – 6.0kN
- Universal T&G Profile
- Micro Bevel 4 sides
- Set Length
- Light Brushed Surface
- VOC Free Water Based Matte Coating E1
- Australian Fire & Slip test certified
- T&G Stair Nosing Available
- Suitable for Hydronic in-slab Heating Only

COLOUR RANGE
600 x 120 x 15/6mm (T&G)

CANNES

COLOUR RANGE
 600 x 120 x 15/4mm (T&G)
 600 x 90 x 21/6mm (T&G)

ACCESSORIES

Stair Nosing

Tongue & Groove Stair nosing is available to support our range of De Marque parquetry.

Stair nosing can be supplied directly from EWF Floors to suit your colour selection or a Reseller may offer these directly from a third party manufacturing to suit local building regulations.

If stairs are involved it's wise to spend time discussing nosing & trim requirements prior to purchase. These images are for illustrative purposes only.

Methods of engineered plank construction lay-up

The manufacturing of engineered flooring is designed to be more resource efficient using up to 2/3rds less of our valuable Oak resource when compared to solid timber floors.

Pre-finished Engineered flooring is dimensionally more stable than solid timber flooring enabling quicker installation with less site related trades to complete the flooring installation.

Multi-ply T&G

Provides a core usually manufactured from mixed hardwood with each veneer (approx. 2mm) running in an alternate direction to provide enhanced radial and longitudinal stability. A wear layer of either 4 or 6mm solid oak is then bonded to the top of the multi-ply core.

Recommended Cleaning Products

Daily care and maintenance is often the most overlooked aspect of a timber flooring project. Preventative maintenance includes the installation of adequate mats at all entrances and felt protectors on furniture legs to prevent scratching. On-going maintenance includes correct cleaning methods and use of professional cleaning solutions and equipment.

Bona®

Loba®

*Bona and Loba products are readily available online or from specialist timber floor and carpet resellers. A full range of non-toxic timber floor care products are available. Contact Bona Australia on 03 9543 4399 for reseller locations near you. Contact Loba Australasia on 03 9460 3444 for reseller locations near you

What to look for

Selection Process

Oak is a natural product and due to the many facets involved in the manufacturing process, each batch, whilst reasonably consistent, will display possible grade and colour batch variations. Quality guidelines are established with our manufacturing partners to set boundaries on variations of colour and grade.

Importantly, always check and confirm your selection when your final purchase is being made. The samples are just that, they are a reflection of one piece of nature at a given time.

Store samples will often deepen or lighten depending on the surface colour and exposure to both direct and indirect UV.

Pre-Installation

To avoid unwanted surprises please make sure the batch you received at site is consistent with the specification before installation. Ideally make sure someone checks the colour prior to installation. Do not assume your reseller or installer has checked the colour before delivery to site.

It's easy to assess an issue at this stage and fix any obvious errors, in many examples the site installer may have no idea what was originally expected.

Don't take a risk, open a few cartons to satisfy yourself, if in doubt make immediate contact with your point of purchase. A new floor installed over an existing floor that has squeaks and movement etc. will not fix structural sub-floor problems.

The sub-floor in both new and or existing construction requires careful assessment to make sure the new floor is suitable for installation.

Remedial activities such as levelling, re-fixing joist and bearers, replacing rotten timber are common considerations when tackling new floor projects.

A flat, secure and dry substrate is essential to achieve a quality outcome.

Installation Methods

Installation method for De Marque Parquetry Herringbone & Chevron Tongue & Groove requires Direct Fix method only, full trowel adhesive on a flat, dry substrate.

It is not suitable as a floating installation.

Direct Fix will take longer to install, the installation should only be completed by an experienced parquetry installer. The process will require a bigger budget as opposed to a normal long plank installation. Previous reference work is a useful guide to assess the capabilities of your intended installer. The Direct Fix method of installation will provide an improved acoustic outcome and deliver minimal impact noise transmission. Careful planning & design layout is necessary to deliver an optimum outcome. Please discuss with your reseller or designer on all installation matters and to assess if the installer has the experience to deliver an amazing finished project.

Care & Maintenance

For all engineered oak flooring correct maintenance and cleaning is required to keep your floor looking great. Preventative maintenance includes the installation of quality mats at all entrances and felt protectors on furniture legs to prevent scratching. If other trades are still active at the site it's wise to place a protective covering over the floor whilst construction continues. This should avoid site related damage. Do not tape covering directly to surface coating. Do not leave protective covering in-situ for an extended period of time. Humidity will build up under the floor protective covering resulting in damage to the floor coating. Our coating warranty will not cover this type of damage.

On-going maintenance includes proper cleaning methods and use of protective cleaning products to keep the floor looking good. A correctly maintained timber floor should almost never need to be sanded back to bare timber. Avoid using any generic floor cleaning solutions regularly sold as Floor Cleaner. Generic floor cleaning solutions will damage the floor coating. Bona or Loba floor care products are a safe and reliable way to keep your floor in great shape.
